

MPT® Ten-K Full Synthetic Motor Oil

Wear protection for drain intervals from 7,000–10,000 miles

*MPT Ten-K Full Synthetic Motor Oils provide improved all-**climate protection, less friction and wear, better fuel economy and extended protection up to 10,000 miles or one year.** MPT Ten-K Full Synthetic Motor Oils meet or exceed the requirements of car, truck, motorcycle and marine engine manufacturers. The instructions should be followed for the vehicle manufacturer's oil change intervals, as well as the filter manufacturer's instructions for filter changes. Please note that vehicles subjected to severe conditions such as stop and go driving, frequent short trips, turbo/super chargers and high performance modifications should reduce oil change intervals accordingly.*

MPT Ten-K Full Synthetic Motor Oils provide a **robust additive package** which includes friction reducing additives, anti-oxidants, detergents and dispersants to keep engines running clean while reducing sludge and carbon deposits. Improved fuel economy, less evaporation loss, less viscosity loss and better resistance to thermal breakdown are all provided over conventional oils.

The high quality synthetic base stocks, as well as the superior additive package with a **higher total base number (TBN)** than conventional motor oils, provide **MPT Ten-K Synthetic Motor Oils** with a better ability to neutralize acids than conventional oils. This provides the motor oil with the ability to perform better throughout its lifecycle and the opportunity to extend the drain interval when appropriate.

Additionally, **MPT Ten-K Full Synthetic Motor Oils** promote **low emissions** while providing the optimum service life for emissions systems and catalytic converters.

MPT Ten-K Full Synthetic Motor Oils are **compatible** with all petroleum and synthetic motor oils. However, mixing **MPT Ten-K Full Synthetic Motor Oil** with other types of oil will reduce the life expectancy and performance.

Please contact us regarding questions in selecting the proper type of motor oil for your vehicle's specifications, as well as your driving habits and budget.

MPT® Standard Service Full Synthetic Motor Oil

An economical full synthetic motor oil for fleet maintenance

MPT Standard Service Full Synthetic Motor Oils are formulated to meet or exceed the requirements of car, truck, motorcycle and marine engine manufacturers. MPT Standard Service Full Synthetic Motor Oils provide better all-weather protection, less friction and wear, better fuel economy, less evaporation loss, less viscosity loss and better resistance to thermal breakdown than conventional oils.

MPT Standard Service Full Synthetic Motor Oils are competitively priced and offer superior performance with an economical alternative to conventional motor oils and most comparable synthetics. MPT Standard Full Synthetic Motor Oils are a popular choice for industrial applications and fleet maintenance, as well as car dealers and repair shops offering full synthetic motor oil changes.

MPT Standard Service Full Synthetic Motor Oils promote low emissions while providing the optimum service life for emissions systems and catalytic converters.

MPT Standard Service Full Synthetic Motor Oils are compatible with all petroleum and synthetic motor oils. However, mixing MPT Standard

Service Full Synthetic Motor Oil with other types of oil will reduce the life expectancy and performance.

MPT Standard Service Full Synthetic Motor Oils should be changed in accordance with the vehicle manufacturer's instructions. Please note that vehicles subjected to severe conditions such as stop and go driving, frequent short trips, turbo/superchargers and high performance modifications should reduce oil change intervals accordingly.

Please contact us regarding questions in selecting the proper type of motor oil for your vehicle's specifications, as well as your driving habits and budget.
